AGILE TEAM CHARTER

1. Team Purpose & Vision:

Team mission:

ATKV members use many separate systems for their details, payments, bookings, news and support. We are building one mobile app, in Afrikaans and English, that puts all of this in one place for ATKV members.

Success definition:

We will be successful when our final product is:

- Members can use one app to manage their profile, wallets, bookings and support requests.
- We deliver each phase on time and the Product Owner accepts it.
- The app is live in the app stores.

Product / Service:

A mobile app (web app that works like a phone app) for ATKV members, with:

- Member profile
- Two wallets: a normal wallet and a Tjieng Rewards wallet
- NFC armband payments at resorts
- News feeds for resorts, branches and culture projects
- Bookings and indemnity forms
- Support through Freshdesk

2. Team Members & Roles:

Name	Role	Key Responsibilities
Luke Jackson	Product Owner	Decides what we build first; speaks for ATKV; accepts finished work.
Scott Kitsoff	Agile Lead	Runs the team meetings; helps remove blockers; keeps work moving.
Zoe Powers	Designer	Designs the screens and how the app looks and feels.
Sabelo Ceza	Developer	The main responsibility is to build the application and connect it to the other ATKV systems and also make sure the code works perfectly.
Andile Faku	Tester	Checks that the app works and finds problems early.
Dephne Moloi	Business Analyst	Writes down what ATKV needs and what each feature must do.

3. Ways of Working:

How we work together day to day

3.1 Agile Framework

- Our team follows the Kanban methodology. We use a product backlog to list and prioritise tasks, and a logbook to track task progress, updates, and team contributions.

3.2 Ceremonies

Ceremony	Frequency	Purpose
Daily Stand-up	Every working day, 15 Minutes	All team members share what we did, what is next, and what is blocking us.
Planning	Once a week	Prioritise and pull work from thebacklog; confirm acceptance criteriaand dependencies.
Review / Demo	Every 2 weeks	Show working software to the Product Owner and stakeholders and collect feedback.
Retrospective	Every 2 weeks	Reflect on what went well, challenges faced, and how the team can improve.

4. Working Agreements

Rules we agree to follow as a team:

- We show up prepared and on time.
- We respect timeboxes and deadlines.
- We give constructive feedback respectfully.
- We raise blockers early.
- We commit to continuous improvement.
- We communicate regularly through group chat or meetings.
- Another team member checks all work before it is added to the app.
- We make sure everything works in both Afrikaans and English.
- We check our work after completing tasks to make sure everything aligns.

5. Communication

How and when we communicate:

Primary channels:

Microsoft Teams - which is used for regular meetings, quick updates, daily standups and when the agenda of the meeting requires screen sharing.

WhatsApp – which is to be used for urgent messages and frequent communication with one another.

Email – which can be used for formal communication, reports, and document sharing.

Response-time expectations:

During core hours (08:00 – 17:00, Monday - Friday), messages should be responded to within 1–2 hours.

Urgent messages Since we are an in-office based, if a message is urgent, you attend to it face-to-face.

Non-urgent communication may have responses supplied within 12 hours after receipt.

Remote / hybrid norms:

- Team members should be available online during core hours.
- Cameras on during important meetings but optional for casual check-ins.
- Clear status updates (e.g., available, busy, offline) must be maintained on Teams.
- We tell the team in advance when we are away.

6. Decision-Making

How decisions are made:

- Consensus
- Product Owner final decision

We try to agree as a team first. If we cannot agree, the Product Owner decides.

Escalation path if we’re stuck:

- Raise it in the stand-up or with the Agile Lead.
- If unresolved, the Product Owner decides after hearing the team's input.
- If it affects time, money or the contract, the Product Owner takes it to ATKV management.

7. Definition of Done (DoD)

When is work really “done”?

- When the application is fully developed and working as intended.
- When the application clearly addresses the problem it was designed to solve.
- When the application is usable, practical, and meets user needs.
- When all tests have been completed successfully and the system runs without errors.
- When the project documentation is updated.
- When the Product Owner has approved the work.
- When the system/application is deployed to the agreed environment.
- When there are no critical bugs or issues found.

8. Core Values & Behaviours

How we treat each other

- *Respect* - We value every team member's input and treat ATKV stakeholders and members with courtesy.
- *Transparency* - We communicate in an open and honest manner and we are transparent in the sharing of information. This allows us to keep all team members informed regarding decisions made and progress made.
- *Accountability* - We are accountable for completing our tasks, meeting deadlines, and accepting/owning all our successes and failures.
- *Trust* - We trust each other to do the work and ask for help early.
- *Learning mindset* - We treat mistakes as learning opportunities and keep improving ourpractices.
- *Collaboration* – We work together as a team, sharing ideas and supporting one another to achieve our project goals. We believe that combining our strengths leads to better results.

9. Risks & Constraints

What could impact our success?

Known risks:

- Connecting to other ATKV systems may be harder than expected.
- Payments and member information must be kept safe.
- The NFC armband may not work the same on every phone.
- The app stores may be slow to approve the app.
- Extra features from the later phase may creep into the first phase.

Dependencies:

- Access to the other ATKV systems (iMIS, Freshdesk, 1Tick, payment provider).
- Quick feedback and decisions from ATKV.
- Designs ready before the developers need them.
- NFC armbands available for testing.

Constraints (time, budget, tools, skills):

- First phase must be done in 6 to 8 months, as agreed in the contract.
- Budget as set in the contract.
- We need people with skills in app building, payments and NFC.

10. Review & Improvement

Keeping the charter alive:

- Charter reviewed every:

- Release
- Retrospective

Our team will review and update the charter during retrospectives to ensure it remains relevant and aligned with our project progress.

- Last updated: 04 October 2026

11. Goals and Milestones

SMART Goals

- Build one easy-to-use mobile app that lets ATKV members manage their profile, use their wallets, view bookings and contact support, before the end of the 8-month V1 timeline.
- Make sure the app is practical and easy for members to use by keeping it simple, bilingual (Afrikaans and English), and available on phones and the web.
- Test the app properly before it goes live, so all features work correctly and members can find their way around easily.
- Complete all planned project tasks within the agreed timeline and work effectively as a team throughout the project.

Project Milestones - Features

Milestone	Description	Target Date
Foundation & Member Profile	Set up the app, member login and profile, and connect to the ATKV member system	Months 1–2
Dual Wallet System	Build the normal wallet and the Tjieng Rewards wallet, with invoice payments and transaction history	Months 3-4
NFC Armband	Link armbands to wallets and allow members to load money and pay at resorts	Months 4–5
Communication Platform	Build news feeds for resorts, branches and culture projects, with subscriptions and notifications	Months 5–6
Bookings & Resort Services	Show current and past bookings, resort information and indemnity forms	Months 6–7
Support, Testing & Launch	Connect support requests to Freshdesk, finish testing and fix problems, then launch in the app stores	Months 7–8
